## Understated

This 2,100 square-foot, second-floor gallery in the heart of Manhattan's prestigious art district, is presented to the city through its 18-foot long, full-height facade window. From street level, the focal point is the signature style of architect Michael Gabellini, as evidenced in the elegant simplicity of the 'floating' ceiling. Throughout the space, recessed, extruded aluminum LiteSlots provide non-intrusive, adjustable accent lighting that is readily adaptable to change.

### 3-Lamp Self-Contained LiteSlots

*Fully recessed Jewelers' Collection gimbal-ring lamp holders with PAR-20 MasterColor™ lamps. Extruded aluminum – meticulously detailed flangeless LiteSlots.*

## Over & Above

A full-height wall at the north end of the gallery pivots on a single ball bearing when a subtle division of the space is desired. Well-placed LiteSlots, with multi-adjustable gimbal-ring fixtures allow PAR-20 metal halide accent lights to be easily re-focused from above the ceiling plane.

## Hidden Jewels

Fully recessed Jeweler's Collection gimbal-ring lamp holders allow PAR-20 MasterColor™ lamps to be focused at variable angles within the recessed housing. Ballasts are fully concealed.
